Chinese HSK4
Polish (Native)
English (Native)

SUMMARY

4 years experience of full-stack web development.

Developed projects as a one-man-band and as part of a team, wielding a broad spread of stacks and technologies. Highlights include interfacing with APIs, writing custom payment plugins, building mid-sized projects from scratch using custom Javascript MVC frameworks.

Experience in **lead roles and project management**

Directed designers and programmers to deliver to specification, guiding development to completion. Managed timeframes and scheduling, and allocated team objectives.

OBJECTIVE

I seek to find a company with a **strong tech foundation**, with people who share a **passion** for their work and with an ambitious company vision. I have often worked independently in the past, but I do take great pleasure in **collaborating** with others and **sharing** ideas.

EDUCATION

BA English

University of Bristol

Oct. 2011 - Jun. 2014

WORK EXPERIENCE

JaguarMove

(October 2018 - April 2019)

Project Manager

E-commerce / Wordpress & Woocommerce on AWS

This was a project handed over by a previous developer who had coded the site with WordPress plugins and a theme purchased over the internet. My challenge was to :

- Implement a non-mainstream payment API with a custom plugin written in PHP, using advanced API features of WC
 - Fully redesign pre-existing site on a limited timeframe of two weeks, following designer specifications.
 - Implement multiple-language support correctly
 - Optimising the site to load quickly in China and following region-specific market and design trends.
 - Manage the server & DNS records using Amazon Web Services
-

GoTutor

(January 2018 - Sept 2019)

Lead Front-End Dev

Genre : Web App : Online Booking System / Custom MVC framework • Node.js

GoTutor was a project devised in collaboration with another, the premise was to develop an online tutor booking service for use in Hong Kong. Tutors had access to profile and schedule management tools, whereas students could search for tutors by location, all written with a bespoke Javascript MVC-style framework to deliver a modular and lightweight experience to our users.

My roles in the project were :

- Leading and managing the front end aspect of the project, designing the UI and writing all the markup.
 - Conceptualised the project from a top-down level, having input on all aspects of the development.
 - Collaborated with and managed contracted designers and programmers.
-
-
-

Jack Penny Consulting

(January 2017 - Dec 2017)

Junior Front End Dev

Genre :E-Commerce / Front-End Developer & Designer

Contracted in development agency to design and implement front-end elements for E-commerce sites. Worked with accuracy according to specification. My roles were

- Turn PSD design into a fully interactive front-end
 - Follow existing CSS / HTML guidelines and standards
 - Improve UI / UX experience
-
-
-

Self-Employed

(January 2015 - December 2016)

Web Developer / Designer

Worked on a number of projects for individuals and organisations big and small: record labels, club nights, event management companies, industrial firms, artists and start-ups, mostly using basic architecture with HTML, CSS, Wordpress, cPanel & JQuery.
